We claim:

1. A HVAC system for reducing contaminant entry, said system having an evaporator compartment comprised of:

- 5      a compartment housing; (4)
- (16 & 12) a supply air duct and a return air duct coupled to said housing; (6)
- an evaporator coil disposed within said housing; (14) (14)
- (16) a fan assembly disposed within said housing, said fan assembly having a fan motor and an impeller attached to said fan motor wherein said impeller is a radial fan impeller. fig.

10      2. The HVAC system described in claim 1 wherein said radial fan impeller is disposed perpendicular to said evaporator coil. fig. 1

3. The HVAC system described in claim 1 wherein said radial fan impeller is disposed adjacent to said return air duct. (fig. 1)

15      4. The HVAC system described in claim 1 wherein said radial fan impeller is comprised of at least one of the materials from the following group: plastic, ceramic, metal alloy or fiber compositions.
